

Know whether to bid. Know what is missing.

QEVORI's tender intelligence and bid-compliance platform helps teams turn an official tender pack into a reviewable workflow: mandatory requirements, evidence gaps, decision signals and an evidence-grounded reviewer pack.

Evidence-first No fabricated claims	Reviewable compliance Pack -> requirements -> proof	Controlled pilot No app download required
---	---	---

A workflow built around disqualification risk

01	QUALIFY	Review fit, timing and obvious pursuit risk before committing the team.
02	EXTRACT	Turn the official tender pack into a mandatory-requirements matrix.
03	MAP PROOF	Connect requirements to approved company evidence and expose missing proof.
04	REVIEW	Prepare an evidence-grounded reviewer pack while unknown facts stay unknown.

Designed to • work from the official tender pack; • make requirements and evidence gaps reviewable; • keep unknown facts explicit; • support human tender review; • run through controlled private pilots.	Not represented as • a guarantee of winning a tender; • legal or procurement advice; • automatic tender submission; • a tool for inventing eligibility or experience; • a way to bypass buyer controls.

Private design-partner pilot

Start with one real tender. QEVORI demonstrates the workflow live, agrees scope and data handling, and then works from the tender pack plus customer-approved corporate evidence. The pilot measures time saved, gaps detected and reviewer corrections before any broader rollout is discussed.

One live tender	Compliance matrix	Evidence-gap report	Reviewer walkthrough
